Experience

NYSHEX / Senior Designer - Design Systems

January 2023 — Present

Joined NYSHEX (New York Shipping Exchange) in January of 2023 to design and build a new custom design system. Dubbed "Keel", the design system is entirely based in Figma with a comprehensive design token foundation driving the component design and behavior. Design tokens were built to follow the global, alias, and component naming structure with white label support.

Ribbon / Senior Systems Designer

June 2022 — December 2022

Hired by Ribbon in June of 2022 to help build and deploy an entirely new custom design system. Starting entirely from scratch, the design system grew to 50+ components with variants and each component received in-depth documentation, interactivity, and prototyping. Additionally, an entire token system was created to make development easier and more consistent.

Key projects in that time:

- Full buildout and maintenance of a design system
- Helped to implement a process for implementation of the design system by designers and developers
- Implementation of a component token system within Figma that syncs to Github
- Lead design on multiple new features & products

Shoflo / Product Designer

May 2015 — June 2022

Joined Shoflo in May of 2015 as the first designer where I remained the sole designer until being acquired by Cvent in May of 2021. Since joining, I was involved in every project launched to the public from its initial whiteboarding, through to design, implementation, testing, and post-release support.

Key projects in that time:

- Creation and maintenance of a custom design system
- Full end-to-end ownership of several major products

Skills

Figma

Knowledgeable on everything in Figma including:

- Autolayout
- Variants
- In-depth prototyping
- Creating and maintaining a design system

Webflow

I've been a Webflow user for 5+ years and have used it to build my portfolio, a11y initiative, and to make rapid prototypes of features for the Shoflo product team.

Accessibility

Huge advocate for creating designs that are inclusive and accessible to the widest range of users possible. Continuously educating stakeholders both internally and externally on the importance of accessibility and how it can be implemented.

HTML & CSS

Able to translate designs from Figma in to working HTML & CSS. Additional ability to create styled components.

Side projects

a11y initiative

a11y initiative is an ongoing side project built in Webflow that aims to create a community wide, month long set of challenges to make their products more accessible.

Education

Stetson University

Masters of Business Administration
May 2012 — May 2013

Stetson University

Bachelors of Business Administration, Marketing
August 2010 — May 2012
